

A background image showing a white semi-trailer truck in motion on a road, with a blurred background of a sunset or sunrise sky. A green and yellow diagonal graphic element is overlaid on the left side of the image.

Trailer Tracking

Complete visibility
of your trailers,
anytime,
anywhere

Keep your trailers in sight.

Improve operations, efficiency and profitability

BENEFITS

- Improved trailer visibility
- Optimal utilization of the trailer fleet
- Manage trailer resources & eliminate redundancy
- Monitor the effectiveness of different trailer types
- Improve maintenance scheduling
- Expedite recovery of lost or stolen trailers

“Regardless of the destination of our trailers within our European transport network, Isotrak’s Trailer Tracking solution gives us complete visibility of where our trailers are. Utilizing our fleet as efficiently as possible ensures we can deliver the best in class service for our customers.”

Ashley Holland - Commercial Manager,
FreshLinc Ltd.

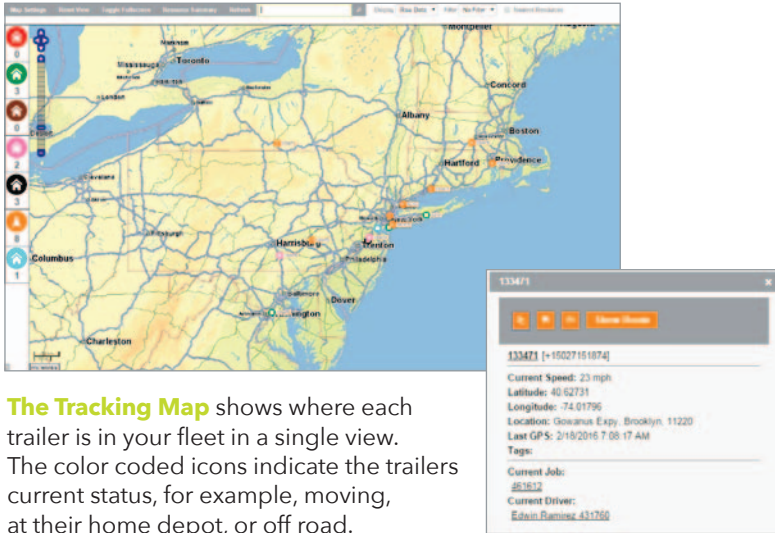

Fleet operators need to ensure that their trailer fleet is always performing at optimal efficiency.

Managing trailer use and optimizing utilization means knowing where your trailers are at any given time so you can **quickly identify trailers that are idle or not where they should be and put them back into operation.** By understanding the usage profile, you can manage trailer logistics more effectively and make your business more profitable.

Isotrak’s Trailer Tracking solution provides **real-time location monitoring.** By configuring geofences around your depots, customer locations, or other places of interest, you will know when a trailer has arrived or left and can view **the route taken, along with historical activity, status, speed, and any generated alerts,** ensuring complete visibility of your trailers. Detailed historical reports provide trend analysis and fleet efficiency KPIs and identify areas where you can optimize your trailer logistics.

Inputting Vehicle Off Road (VOR) information into the Maintenance module means owning and visiting locations can be alerted of imminent service requirements, improving maintenance scheduling and overall fleet operations.

Isotrak's Trailer Tracking solution gives you the power to manage your fleet operations and stay in control. Use real-time location monitoring to see exactly where your trailers are and improve trailer utilization.

The Tracking Map shows where each trailer is in your fleet in a single view. The color coded icons indicate the trailers current status, for example, moving, at their home depot, or off road.

Resource Tracking Analysis can be viewed in satellite or street view and shows the route of a specific resource.

Geofences can be created to monitor arrivals and departures for specific places of interest. The arrival and departure times can be viewed in the Route Analysis map.

FEATURES & FUNCTIONS

- GPS tracking gives regular location updates
- Pin point trailers to their exact locations
- Real-time data captured throughout a trip
- Geofence alerts
- Trailer usage is displayed by category; on route, depot, known place or restricted place
- View historical positions of a trailer
- Input VOR information; owning and visiting locations can be alerted to upcoming service requirements
- Review association against both tractor & trailer
- Reports in PDF or Excel format can be scheduled to arrive in multiple inboxes
- Allocate jobs to trailer for improved job matching (Job & Resource Management module required)

Do you carry temperature sensitive loads? Isotrak's **Temperature Management** solution ensures that the loads you are carrying get to the intended destination as they should.

Temperature Management - real time temperature data at your finger tips:

- Complete end-to-end temperature audit trail
- Alerts & alarms enable quick response to any issues
- Reduces potential of spoiled loads
- Ensures trailers are at required temperature before loading
- Faster query resolution
- Provides customers with proof of transit temperatures
